

Custom Software As A Service

Built to Increase the Productivity of Your Business

Software as a Service is licensed as a monthly subscription and typically performs a specific set of business functions and comes "as is". Occasionally the interface can be configured to meet user preferences but very rarely can it be 100% tailored to provide a point solution to address specific productivity improvements.

T2Vsoft utilizes its years of software development experience and powerful software platform to address specific areas in your business to increase productivity.

We are non-disruptive and integrate with your existing systems.

We develop and operate your solution for you in Microsoft Azure and provide continuous monthly improvements, defined by you, as part of your subscription.

Getting Started

Not more than one hour of your time is required to determine if T2VSoft can increase your company's productivity. Simply :

Send us a brief email that gives a brief description of what you are looking for.
brad.hudon@t2vsoft.com

Schedule an hour of you and your teams time for a quick demo of our projects and discuss how we can help your organization

No more than 7 days later schedule another hour of you and your teams time for a demo of how we can increase your productivity with a confirmation of what it will cost.

Pricing

We fix bid setup and operating costs for all of our solutions. We also allow you to cancel at any point with one month notice.

We do not accept any projects that would cost more than a **\$25,000USD** setup with a monthly total operating cost (that includes monthly improvements/enhancements based on your requirements) of **\$5,000** per month. There are no constraints on infrastructure or number of users.

All-In Microsoft Cloud.
